COOPER FREESTANDING TUB FAUCET INSTALLATION

BEFORE YOU BEGIN
We recommend consulting a professional if you are unfamiliar with installing plumbing fixtures. Signature Hardware accepts no liability for any damage to the faucet, plumbing, bathtub, floor, or for personal injury during installation.

Observe all local plumbing and building codes.

Unpack and inspect the items for shipping damage. If any damage is found, contact our Customer Relations team at 1-866-855-2284.

GETTING STARTED
• Ensure that you have gathered all the required materials that are needed for the installation.

• For these instructions, it is assumed that the old faucet has been completely removed and any necessary repairs or modifications to the water supply have been completed.

TOOLS AND MATERIALS:
- Plumbers Tape
- Thread Sealant
- Adjustable Wrench
- Level
- Hex Wrench
- Drill
- Pencil
- Safety Glasses
COOPER FREESTANDING TUB FAUCET INSTALLATION

INSTALLATION

1. Set the faucet base at its desired location, and mark the location of the mounting holes, as shown. Drill one ø12mm hole at each marked location.

2. Insert the provided expansion bolts through the bottom of the base, as shown. Slide the washer and locking washer onto the bolt, then slightly tighten the nut onto the bolt. Do not tighten fully.

3. Lower the faucet base into the drilled mounting holes, as shown. Remove the protective cover. Ensure that the base is level, and make adjustments as needed before moving on.

4. Connect the hot and cold water lines to the inlets on either side of the faucet base, as shown. Ensure that the hot and cold lines are connected to the proper inlet. Apply plumber’s tape or thread sealant to the threads before tightening.
5. Insert plugs into the outlets of the faucet base, as shown. Then, secure the flange to the base using the provided hex screws and hex wrench.

6. Perform a water pressure test before moving on. Ensure that there are no leaks in the connections.

**Note:** If you are not familiar with performing this type of procedure, consult a licensed plumber.

7. Remove the hex screws, flange, and plugs that were installed in step 5.

8. Place the protective cover back onto the faucet base. **Proceed to the installation of your finished floor before moving on with faucet installation.**

**Important:** The top of the faucet support base must be set at least 1-1/4” to 1-1/2” below the finished floor, depending on tile and substrate thickness, which lowers the height of the faucet an identical amount.
9. Remove the protective caps from the outlets on the faucet body, to prepare for assembly. Assemble the faucet as shown below, to prepare for installation.

10. Remove the protective cover from the faucet base. Lower the faucet onto the base, ensuring that the water lines are set into the water outlets. Fasten the faucet to the base using the provided hex screws and hex wrench.
11. Use the provided flexible hose to attach the hand shower to the faucet body, as shown.

12. Once installation is complete, turn the faucet on. Allow the water to flow for approximately 60 seconds to check for any leaks. Ensure that hot and cold water are running appropriately. Divert water to the hand shower and run for another 60 seconds.
